1. Executive Summary

7trendzlearn.co.za (Future Learning) is an AI-powered Learning Management System and tutoring platform built by 7TrendzData, Johannesburg. The platform automatically builds courses from any topic and provides 24/7 AI tutoring for South African students.

Key Findings:

- The site is a React SPA with NO server-side rendering — search engines cannot see the content. This is the #1 ranking blocker.
- No robots.txt, sitemap.xml, canonical URL, or Schema.org markup exists.
- OG image and Twitter card incorrectly point to Lovable.dev instead of your brand.
- 10 direct competitors identified in the SA AI education space.
- Zero backlinks, zero organic rankings, zero AI citations — completely new domain.
- Quick wins (robots.txt, sitemap, schema) can be deployed in under 30 minutes.

Goal: #1 ranking for target keywords within 6 months via structured technical SEO, content strategy, and competitive comparison pages.

- Add source citations in all content – AI systems cite pages with statistics, quotes, and references 40% more often
- Use comparison tables – AI pulls structured data from tables for 'best of' and 'vs' queries
- Add FAQPage schema – directly feeds Q&A content to AI systems
- Create original data / research – unique statistics get cited by ChatGPT and Perplexity
- Build third-party presence – Wikipedia, Reddit, Quora mentions boost AI citation rates significantly
